

Zeon Diesel Range

Pumptronics low cost diesel pump solution is the Zeon. Using similar hydraulics to those in the rest of the Pumptronics range, the meter (accurate to 0.5%) is fitted with an integral encoder. A new, electronic head combines processing and power switching requirements in one board for simpler future maintenance.

With this elegant solution, we are able to offer a cost effective unit to meet the needs of almost every commercial vehicle operator. Its size means it is ideal for locating within the end cabinet or banded area of a tank pack.

With the entire cabinet being manufactured from solid stainless steel it can withstand the roughest and toughest environment. So whilst it is not approved for re-sale use the Zeon is surely the ultimate low cost diesel pumps.

Zeon Diesel Mono

Zeon Diesel Twin

Model Range

Complete range of models available are shown overleaf

Standard Features

- Solid stainless steel construction
- New Electronic head enclosure with illuminated volume display, one side only
- Integral nozzle locking (no padlocks required)
- Left or right hand nozzle boot
- Electro mechanical totaliser – always visible
- Pulse output interfaces 100PPL or 10PPL for Fuel Management systems
- Commissioning and 12 months on site warranty

Options

- Optional Second side display available
- Matching stainless steel under pump plinths for sites without suitable islands
- Galvanised Under pump cradles/stools for new installations
- Breakaway Coupling
